

50 FT. x 5/8 IN. SWIVEL GRIP GARDEN HOSE

The Eden Swivel Grip Garden Hose is perfect for getting your watering chores done outside. The 50 ft. 5/8" garden hose is specially designed to be flexible and lightweight to move around the yard. The hose provides extra strength, prevents kinking, and resists pressure build-up that can accumulate over time.

The swivel grip allows you to easily connect and disconnect the nozzle or other watering tools. The hose can be used with any Eden product and is compatible with most other watering tools.

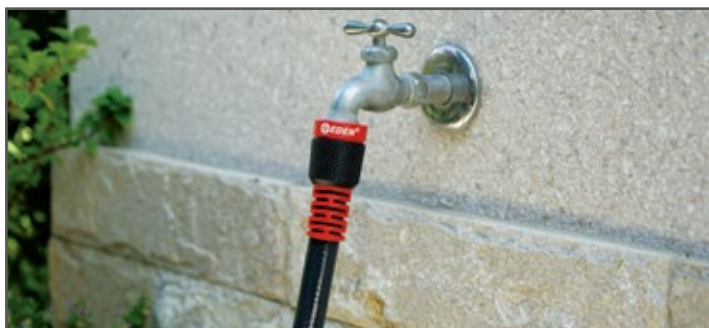

The end connectors are made of rugged TPR and the couplings are a mixture of brass and aluminum for a stronger connection. The braided reinforced material of the hose allows for high-pressure conditions while reducing hose kinking.

FEATURES & BENEFITS:

- **Durability** - 3 Ply braided reinforced hose offers strength and flexibility while reducing wear and tear. Stands up to 300 PSI water pressure.
- **Versatility** - Connects to any Eden product and is compatible with most other watering tools.
- **Lightweight** - Even when filled with water, the hose will still be lighter than comparable rubber hoses.
- **Simple Connections** - Swivel grip connectors are included to easily connect your hose to the faucet and connect watering accessories.
- **Ergonomically designed end connections** - provides for a smoother interface compared to traditional end connections. No tools required.
- **Ease of use** - The swivel grip hose connections provide for ease of use without the worries of kinking or breaking the hose.
- **Long lasting** - End connectors are made of durable TPR with the inner core a mixture of brass and aluminum for years of reliable use.

INSTALLATION:

1 Female end connects to the faucet

2 Male end attaches to most watering tools

Hose end grip protector reduces kinking at the faucet.

With hose end grip protector:

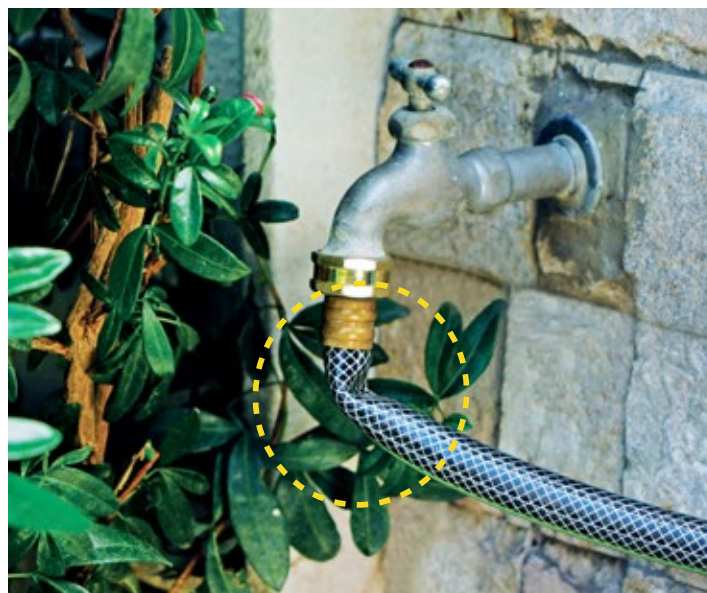

Maintenance + Care:

Before use, check that the washer is securely in place. Drain the hose after each use and store on a hose hanger or hose reel out of direct sunlight. For best performance, coil the hose with large loops and do not store with any kinks in the hose.

Storage:

Drain the hose after use. Do NOT allow water to freeze in the hose. Store indoors, away from freezing temperatures.

Without hose end grip protector:
